SUMMARY

Third-year Computer Science student (Muhammad Ali Jinnah University) working as a Junior Full Stack Developer at Core Unity Solutions, building features with modern JavaScript frameworks and Laravel. Completed an internship in full stack software testing and a QA course. Strong foundation in data structures, operating systems, and networking, plus communication skills from digital marketing work.

EXPERIENCE

Junior Full Stack Developer | Core Unity Solutions (August 2026 – Present)

- Engineered dynamic web applications featuring integrated ERP functionalities, streamlining business workflows and automating data synchronization between Next.js frontends and Laravel backends.
- Designed and optimized high-converting, pixel-perfect landing pages utilizing Vite, HTML5, and CSS3, achieving maximum responsiveness and cross-browser compatibility.
- Developed and maintained secure full-stack features using Next.js (App/Pages Router) for server-side operations and Node.js/Laravel for robust RESTful API endpoints.
- Collaborated closely with cross-functional teams using Git for version control to debug critical runtime issues, optimize query performance, and ensure smooth deployment lifecycles.

Key Commercial Deliverables:

- **Hudayriyat Island (hudayriyat-island.ae):** Developed a high-performance, multi-page real estate lead-generation platform using Next.js. Implemented programmatic SEO (canonical URLs, Open Graph tags), custom international phone-code selectors, and localized dynamic routing for 10 residential communities.
- **Forest Living – Ghaf Woods (forestliving.community):** Built a responsive digital marketing application featuring an interactive bedroom-based floor-plan selector, dynamic image galleries, real-time payment-plan calculators, and optimized lead-capture forms.
- **Core Unity Solutions Official Website (coreunitysolutions.com):** Overhauled the corporate platform covering dynamic services, interactive case studies, and blog systems. Integrated seamless automated appointment-booking workflows and direct WhatsApp API channels.

Marketing Intern | North Services (September 2025 – February 2026)

- Assisted the marketing team with content creation and social media management for ongoing campaigns.
- Supported planning and coordination of digital marketing and promotional activities.
- Contributed to campaign reporting and communication with team members and stakeholders.

PROJECTS

Custom Full-Stack Headless CMS Engine

- Architected and developed a proprietary Headless CMS from scratch using Laravel to completely decouple content administration from a high-speed Next.js frontend.
- Designed a highly normalized relational database schema and built a secure CRUD administration dashboard for dynamic block-based page content management.
- Implemented a custom media processing pipeline within Laravel's file system, incorporating automated image optimization, secure MIME-type validation, and fast asset streaming via API.
- Developed secure RESTful API endpoints using Laravel Resources, optimizing JSON payload delivery and leveraging token-based authentication (Laravel Sanctum).
- Utilized Next.js Incremental Static Regeneration (ISR) and cache revalidation strategies to update client-facing pages instantly upon CMS updates without rebuilding the frontend.

Email Management Web App (AetherMail) – Core Unity Solutions | Node.js, Express.js, SQLite, IMAP/SMTP, Google OAuth 2.0

- Built a web-based email client that combines multiple accounts on different domains (Gmail and custom-domain mailboxes) into one unified inbox.
- Developed a sync engine using ImapFlow and Mailparser that syncs accounts in parallel, isolates failures per account, and prevents duplicate emails using Message-ID.
- Implemented Google OAuth 2.0 with automatic access-token refresh, and stored other account credentials using AES-256 encryption.
- Built email sending with Nodemailer, a rich-text editor, attachments, search and filters, and displayed email HTML inside a sandboxed iframe.

School Management System — .NET C# & SQL Server

- Built a GUI-based system in C# WinForms with SQL Server connectivity via ADO.NET for CRUD operations and real-time data retrieval.
- Designed a normalized database schema for student records, attendance, and fee management with data integrity constraints.

Restaurant Management System — OOP

- Designed using OOP principles with structured data persistence for menu, orders, and billing, focused on clean data flow and record management.

Concept & Demo Websites

- **Willow & Co. (hand-crafted.netlify.app)** — Designed and built a responsive five-page small-business concept website (Home, About, Services, Gallery, Contact), deployed on Netlify.

TECHNICAL SKILLS

Frontend Technologies: HTML5, CSS3, JavaScript (ES6+), React.js, Next.js, Vite, Tailwind CSS, Responsive Design
Backend & APIs: Laravel (PHP), Node.js, RESTful APIs Development, Laravel Resources, API Authentication (Sanctum)
Databases & Enterprise: SQL Server, MySQL, Eloquent ORM, ADO.NET, Database Normalization
Software Engineering Core: Data Structures & Algorithms (DSA), Software Quality Assurance (SQA/Testing), Version Control (Git/GitHub), Object-Oriented Programming (OOP)
Languages: English (Professional), Urdu (Native)

CERTIFICATIONS

- Software Testing (QA) Course — SQA Training (2025)
- Industrial Networking Essentials — Cisco Networking Academy (2026)

EDUCATION

Muhammad Ali Jinnah University, Karachi — Bachelor of Science in Computer Science
Expected Graduation: 2028 | Current Status: Third-Year Student
